

Testing Calculator

Your assignment for this week is to test the previously created calculator. You shall also *overload* your *addition* (+) and *subtract* (-) method with versions that takes a array as input parameter.

Approval demands:

- xUnit test the division method for dividing with Zero (No exception crash allowed)
- Each mathematical operation should be testable by xUnit.
- Application need to have a Overloaded method for Addition & Subtract that accepts a array as input parameter.

Optional:

- Handle Exceptions that may happen. In particular when user enters input.
- Application need to be able to perform mathematical operations addition, subtraction, with multiple values.

Submission:

Upload on GitHub then send the repository link to your teacher.

Good luck!
